STRUCTURAL BONDBERS CREATE LIMITLESS OPPORTUNITIES IN MAINTENANCE & REPAIR

This introduction from Henkel is another milestone for its LOCTITE® brand. The company has developed a range of Universal Structural Bonders whose many attributes have been achieved through patented hybrid technology. This innovative approach substantially extends the application scope of these adhesives which also afford improved health and safety benefits.

The general-purpose Universal Structural Bonders combine the qualities of different adhesives to achieve bond strength, fast fixture speed and durability. They provide improved performance on a variety of substrates and the versatility to solve many more maintenance and repair challenges. Formulated specifically for application in harsh factory and plant environments, they are effective in a wide variety of operating conditions, from temperature extremes to high vibration.

The LOCTITE® HY 4070 provides a good example of what these qualities mean to maintenance engineers seeking methods to optimize efficiency and reduce costs while keeping plant running smoothly and safely. It provides ultra-fast fixturing and bond strength on most plastics or plastic/metal combinations and also on rubber materials.

LOCTITE® HY 4070 is a must-have in any maintenance tool box as it's one product for multiple applications. It therefore simplifies the adhesive selection process, reduces inventory and need for storage. Although suitable for the lion's share of applications where a 60-second fixture is required, it is particularly good where variable gaps up to 5mm between mixed substrates are involved.

Typical applications include the tacking and temporary location of parts before permanent fixture through to emergency repair of moulded plastics or metal parts and rebuilding plastic lugs and mounts. The product is supplied in a 10ml, ready-to-use pack.
