

Televic Rail & McLaren Enter Collaboration Agreement

Televic Rail and McLaren Applied Technologies are pleased to announce the signing of a memorandum of understanding to enable collaboration in the design and supply of **passenger seat reservation and seat occupancy systems** for the rail industry.

Innovative systems for rail

Televic Rail, the UK leading supplier of on-board passenger information systems with over 5,000 vehicles equipped and McLaren Applied Technologies, using their experience in public transport combined with ground breaking innovation and sensor technologies developed in motorsport, will join forces to offer innovative systems for the rail industry.

Seat reservation and occupancy systems

Both companies recognise that the industry is demanding optimised systems which will allow train operators to offer improved services and increase revenue whilst also bringing significant improvements in passenger experience.

This relationship will allow both companies to develop further on their current projects such as the LNER MK4s, the AT300 (IEP) running on GWR, LNER, TPE and First Hull, and the Translink Enterprise fleet in Ireland.
