[Dold, relays with a proven track record](#)

Dold are a leading ISO 9001 approved European manufacturer of measuring relays, timers and interface relays for industrial, Safety and Railway applications, with a hard-earned reputation for service product reliability and performance.

Currently throughout Europe, Canada, Asia & USA, many train manufacturers and maintainers confidently specify install and rely on Dold relay products. As a direct result of this, many products in our range comply with the current UK rolling stock requirements for, EMC, Voltage & transients, temperature and shock and vibration.

Test and reliability data is available to customers on request, with the option of additional performance testing if required; our Railway compliant products are also CE approved for Railway applications.

As Dold are the designers and manufacturer of our products internal relays, enclosures and the PCB assemblies, we have the ability to offer cost effective and flexible technical solutions to replace many of the old and discontinued relays and timers still found in service on UK rolling stock.

We are currently offering innovative solutions to train maintenance depots for HV switchgear interlocking and trapped key interlock access. Based on the Dold STS system, this flexible and compact modular system is very robust, easy to operate and enables safe interlocked access to hazardous areas. Dold offer Depot managers and safety personnel a free assessment and key exchange plan options, which enables the Dold system to be easily and ergonomically integrated into existing depot facilities.
